

*Building a community partnership*

## Pangea Electronics and FabLab.Berlin: Together for a better and sustainable life

The Berlin Startup Pangea Electronics with his modular Notebook Pangea Sun and the open digital fabrication studio FabLab.Berlin are building a DIY – Do It Yourself - community partnership.

Together they want to inform people about her work and why ethical products are important through educating people how to build their own products. To connect the people with matching projects. To support people to give advice and resources. They want independent people to hire and build up people for a better and independent life.

The target of the collaboration between FabLab.Berlin and Pangea Electronics is to strength the worldwide DIY Community through an social Open-Source/Hardware project and extend the audience for ethical products.

The crowdfunding campain for the modular Notebook Pangea Sun for an innovative, eco friendly and sustainable world starts on 02. March on indiegogo.com.
