

## Germany in Pangea fever

### Makezine, heise-online, B.Z., Die Welt: Rising news about the crowdfunding campaign of the new notebook Pangea Sun in the tech sky

„Berlin Startup starts crowdfunding for „modular-notebook“. The founders want to reduce electronic waste and develop a sustainable IT production. “

„An eco-friendly Notebook, like a puzzle“.

„Berlin-based Startup: crowdfunding campaign for an eco-laptop“

The feedback was terrific: The excited readers posted many questions and placed their comments. Pangea Electronics spend long hours and weekend shifts to generate all responses.

The high interest is not a coincidence since .Pangea Electronics develops a modular notebook that can keep up with all functions of a notebook.  
In addition: Due to its modular construction all parts can easily be replaced, which keeps costs and resources low.

Of course, all the other components of the notebook are also interchangeable. If the notebook gets old and is no longer fast enough for the user, the corresponding module is simply replaced. Thus Pangea Electronics contributes to the improvement of the environment, because the notebook does not end up as electronic waste.

Now the berlin-based start-up wants to increase performance:

- \* RockchipOcta-core RK3368 chipset
- \* ARM Cortex-A53
- \* 64-bit CPU, up to 1.5GHz
- \* PowerVRG6110GPU, supports OpenGL ES 3.1, OpenCL 1.2 and DirectX 9.3
- \* 2 – 4 GB DDR3
- \* Android 5.1.1
- \* Bluetooth 4.0

Everything is possible from surfing/mailing to editing holiday pictures as well as watching movies or playing games.  
All earlybirds can purchase our products for just 449 \$ (399€) on Indiegogo.com!
